PROJECTS

Password Generator—

This project allows a user to have a randomized password. The user is prompted with questions to select what items they would like their password to include.

Weather Application-

This project allows the user to type in any city into the search field and view the current weather and 5 day forecast.

Workday Scheduler- This Web application allows you to schedule your work day and save the changes you made. The current day of the week is displayed and the current time is highlighted.

Horiseon Web Application- In this project I refactored existing code to make it more accessible by adding semantic HTML. I also fixed a button in the navbar that wasn't working.

Date Night In Web Application—

This group project is a web application that allows the user to have a random movie and recipe generated with a click of a button. The movie's poster and recipe is displayed on a modal.
